

Beauty lies in the Details

The smooth carbon-fiber contours, slim forefoot and trim ankle of the SILHOUETTE™ combine to deliver a truly flexible, lightweight and highly responsive prosthetic foot.

MULTI-AXIAL ROTATION

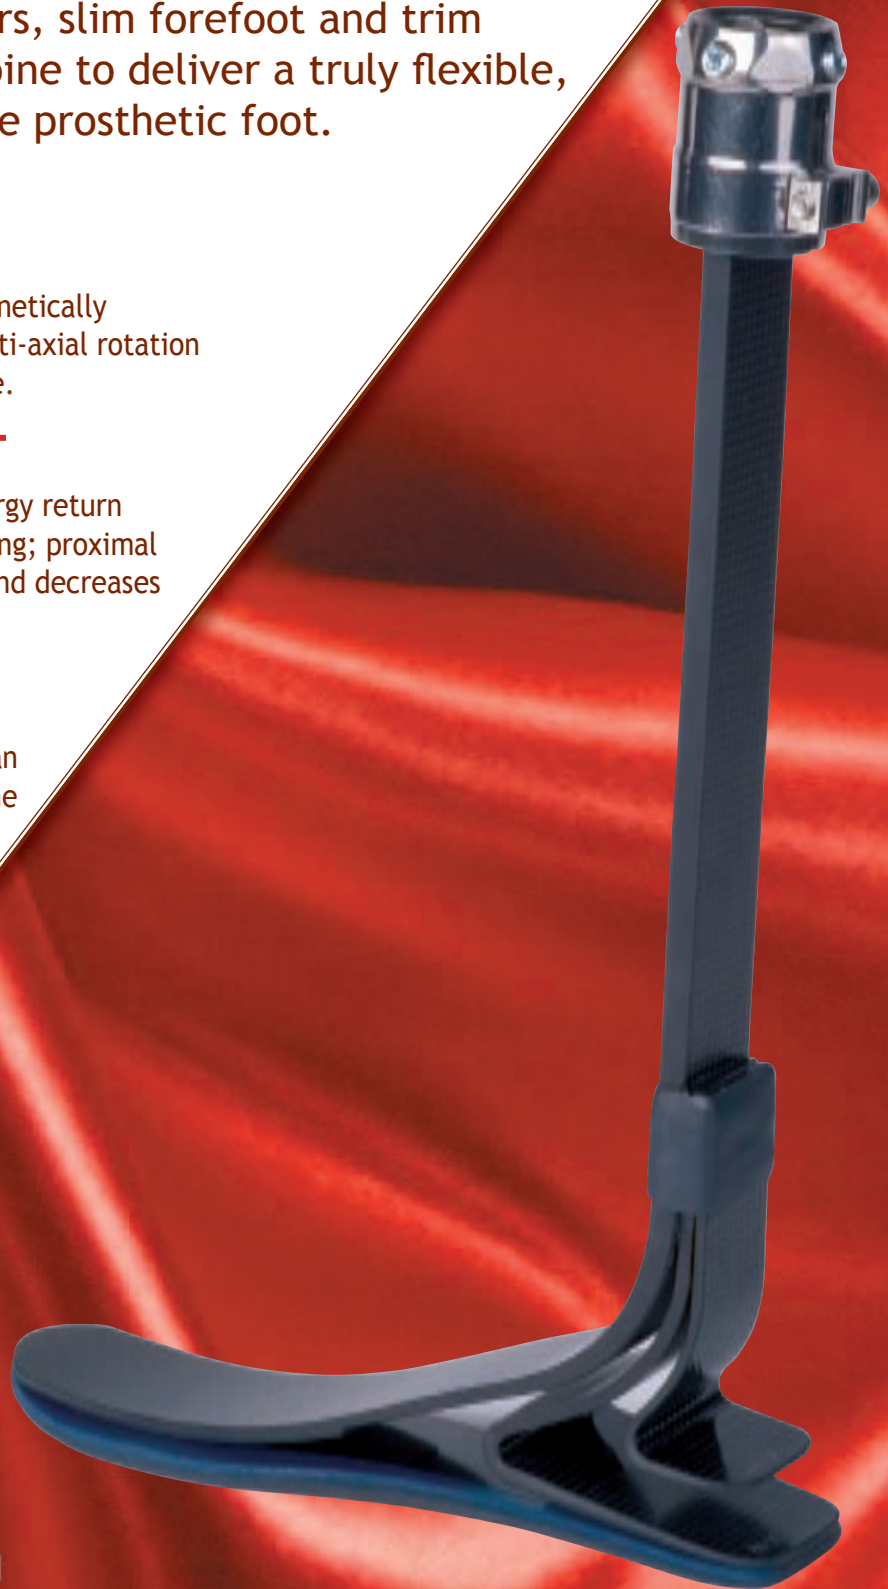

Slim forefoot design complements the bio-kinetically engineered floating soleplate to provide multi-axial rotation and easy, natural push-off at terminal stance.

AGILE AND LIGHTWEIGHT

Fluid dual heel design provides dynamic energy return with the added insurance of an override spring; proximal weight distribution increases swing speeds and decreases perceived weight.

EASY TO FINISH

Neat and trim, Silhouette's ankle results in an elegantly proportioned leg, sure to please the most discerning wearer.
