

Thoughtfully designed to smoothly progress through the gait cycle, the **Cadence HP™** performs like a biological foot.

The next person you meet may be wearing a Cadence HP™, but you may never know it because, unlike the competition, the Cadence has **no dead zone**. Careful gait analysis led to its revolutionary design.

Balancing the motion of each step, the Cadence HP transfers energy smoothly through the gait cycle, emulating a natural gait. This enables Cadence HP users to walk, run, and even dance with less effort and more confidence.

Lighter than ever. With its newly designed posterior tendon, the Cadence HP weighs only 440g. (size 25cm)

No specialized alignment required. It's easy to install and maintain — spend more time with your patient and less time in fabrication. The Cadence HP is appropriate for amputees with moderate to high activity levels, and those who endeavor to do more.

Circle # 18 on Readers' Service Card

60-day trial. Call now to receive the Cadence HP kit and see for yourself how easy it is to exceed patients expectations. If you choose to return the kit within the trial period, keep the shoe horn for FREE!
