

*With a single orthosis,
meet the changing needs
of a post-stroke survivor
during the first year*

FRED'S PATIENT INSPIRED SOLUTION

An Ultraflex Adjustable Dynamic Response™ (ADR™) KAFO with an UltraQuick Release™ (UQR™) mechanism gave Fred knee/ankle stability and motion, and selective muscle augmentation. As Fred progressed, muscle augmentation was lessened, PT continued uninterrupted, and the KAFO was converted to an AFO using the UltraQuick Release™ feature. The result was improved compliance and fewer learned compensations. Ambulatory status progressed from moderate assist with a hemi walker to independent ambulation with a single point cane.
