

*Crouch secondary to Spina Bifida is
being managed with ADR™ for
improved heel rocker,
range, and comfort*

BRENDAN'S PATIENT INSPIRED SOLUTION

Brendan's history with solid AFOs was problematic. He experienced difficult fittings, numerous breakages, and the need for frequent fitting adjustments. When ambulating, Brendan experienced left forefoot contact at initial contact and right foot flat contact. Once Brendan started using Ultraflex Adjustable Dynamic Response™ (ADR™) functional, bilateral braces, problems with fit, breakages, and adjustments were eliminated. Improvements included left foot flat at initial contact and right heel strike. Parent reports strengthened leg muscles and a more normal, less rigid looking gait.
